MACROECONOMIC SUMMARY

INTERNATIONAL

February was marked by the proliferation of Coronavirus to countries other than China, which was the focus of the disease until then. Iran, Italy and South Korea, just to name three of the most dramatic cases, reported an exponential advance in contamination. For now, the number of cases is still small compared to those found in China, but the exponential acceleration of contaminated scares.

This background should continue to put pressure on global growth, raising the possibility of recession in some countries and regions or, at least, accentuating and prolonging the current "crisis". The expected recovery in global growth was already fragile and delicate even before this event. Now uncertainties become greater and more acute.

Global exchanges had been ignoring this risk until the second half of February, in despite of signs of weakness in other assets, such as Gold, Copper, Treasury and Petroleum, but ended up showing a fast and sharp drop at the end of the month! The world is going through a supply shock that hits the services sector, which has been the main pillar of the global economy.

At this stage of the economic cycle, in our view, the greatest risk lies in the leverage of the corporate sector in the USA and China. Companies in these countries have leveraged a lot in recent years. While there was growth and interest rates were low, there was no problem. If the world experiences a more pronounced and lasting slowdown, the payment capacity of these companies will be compromised.

BRAZIL

Currently, banks are not the main holders of these debts, but society, investors and passive funds. A problem in this sector may cause a "domino effect" on the world economy and global financial markets. For now, this is an "alternative" scenario, a "risk scenario", but it takes shape as the Coronavirus it spreads, and its control becomes more difficult every day.

At this moment, Brazil will remain a passenger of the international situation. Now, doubts are still greater than certainties. Therefore, we expect a short-term of greater volatility and uncertainty.

The risk of a global recession has increased considerably in recent days. As this risk increased, there was also an uncomfortable, but inevitable, repricing of the markets, in Brazil and worldwide. We are convinced that this challenge will be overcome by society in the long run, but we will have to be parsimonious given the view that we will have weeks, perhaps months, of uncertainty.

COMMENTS

FIXED INCOME

We believe that the cycle of Selic rate drop is nearing its end. For our investment horizon and given the pricing of the short and intermediate part of the interest rate curve, we still don't like the risk / return. We still like the long part of real interest rate as the carry for those with more extended investment terms.

VARIABLE INCOME – STOCK MARKET

The month presented a sharp decline in the equity market. Despite the drop, we already see a clear movement of "detachment" or "differentiation" of the Active Funds in relation to the stock market indexes, showing the growing importance of the selection of managers in this phase of the economic cycle.

We would like to reinforce a message that has already been issued in past months: We understand that 2019 was positively atypical. No appraisal process is usually linear. We need to be prepared for some uncertainty and volatility throughout 2020.

Our biggest challenge is, and will continue to be, to differentiate noise from real trend changes.

We maintain a relevant and above average allocation in variable income, focused on "Valor", "Small and Mid Caps" funds, in addition to some more active and liquid funds, which are able to "navigate" a scenario of improvement in local cyclical sectors to the detriment of global cyclical costs.

STRUCTURED

February reinforced our vision of diversifying the allocation of the Multimarket Funds beyond the Macro Funds, seeking funds and niche managers and with a low correlation with the market's "beta".

This background also reinforces the need for processes and patience in the allocation of managers who eventually go through periods of performance below expectations, without substantial changes in the qualitative analysis of the manager / fund. As such, we continue to adopt a posture of reducing macro multimarket to the detriment of niche and de-correlated funds.

We believe that few macro-market managers will have real conditions to generate consistent returns above the past CDI, which we believe to be a large part of the interest rate closing cycle in Brazil in this monetary policy cycle.

OFFSHORE INVESTMENTS

We maintain a defensive posture in this class, seeking active managers and prioritizing fixed income, especially those of "Absolute Return".

In the Equities portion, we had a more relevant adjustment and we are looking again at opportunities for portfolios with this profile, but still with allocation below the average.

In High Yield and Emerging Credit, we have the opposite concern, in which prices did not have a relevant adjustment and, therefore, the asymmetry seems to us a little worse at this moment.

INVESTMENT POLICY
Macro Objective:

Obtain yields higher than the established benchmarks, in order to, in the long term, meet the objectives of the benefit plan to provide satisfactory complementary income to the plan's retirees, respecting the allocation and risk limits established in this policy and the financial-actuarial balance benefit plan.

Resource Allocation:

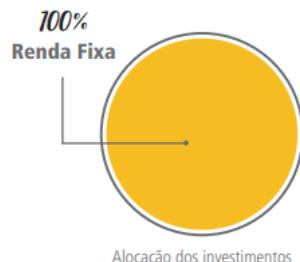

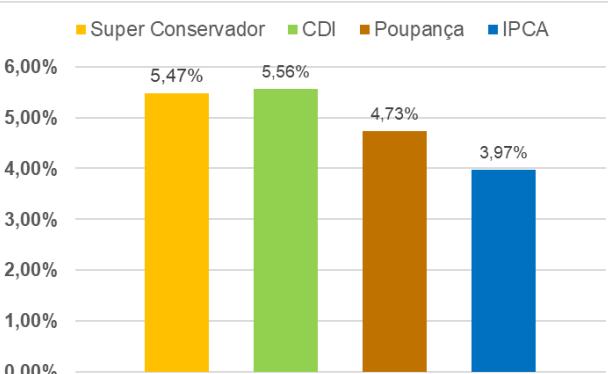

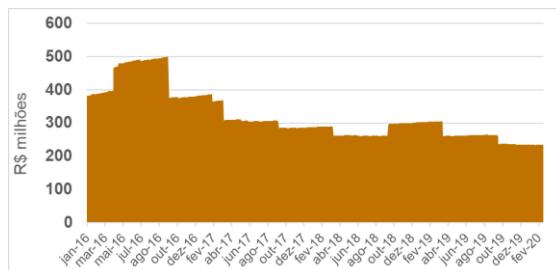

Segmento	Mínimo	Máximo	Alvo	Benchmark
Renda Fixa	80%	100%	100%	IMA-S
Crédito			50%	
CDI			50%	
Mandato Composto			0%	
Renda Variável	0%	0%	0%	IbrX
Multimercados	0%	10%	0%	CDI
Invest. Exterior	0%	5%	0%	RF: CDI / RV: MSCI World Index em BRL

ACCUMULATED PROFITABILITY (%)

PROFITABILITY (% CDI)

Período	SuperCons.	CDI	% CDI
3m	1,03%	1,03%	100%
6m	2,22%	2,38%	93%
12m	5,47%	5,56%	98%
24m	12,03%	12,32%	98%
36m	21,97%	22,37%	98%

Target (Public):

Due to its composition, it has a minimum probability of having negative returns, so it is recommended for those who are very averse to financial risks. In longer periods, the profitability of this profile tends to be lower than that of the others, as it is proportional to the risk assumed, which is also low.

INVESTMENT POLICY

Macro Objective:

Obtain yields higher than the established benchmarks, in order to, in the long term, meet the objectives of the benefit plan to provide satisfactory complementary income to the plan's retirees, respecting the allocation and risk limits established in this policy and the financial-actuarial balance benefit plan.

Resource Allocation:

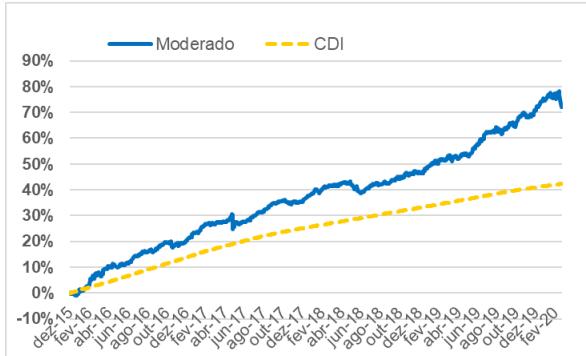

Segmento	Mínimo	Máximo	Alvo	Benchmark
Renda Fixa	50%	100%	63%	65% IMA-S + 35% IMA-B
Crédito			30%	
CDI			0%

CDI: é a sigla para Certificados de Depósito Interbancário. São títulos emitidos por instituições financeiras, com o objetivo de transferir recursos de uma instituição para outra, por um curto período de tempo. Funciona como um empréstimo entre instituições financeiras, e também serve de referencial para o rendimento de investimentos de renda fixa, como o CDB, LCI e LCA.

Com o passar do tempo, as taxas praticadas no CDI (taxas DI) passaram a servir de referência para o mercado de crédito e, consequentemente, para o próprio mercado financeiro. Como os bancos conseguem emprestar dinheiro praticamente sem risco no mercado interbancário, o CDI acabou virando um padrão para analisar qualquer operação de investimento. A lógica dessa comparação é simples: se é possível ganhar dinheiro com liquidez e segurança a uma **taxa livre de risco**, por que se aventurar em outros investimentos com a mesma rentabilidade, mas com um risco maior? Dessa forma, a taxa DI começou a ser considerada como a rentabilidade “mínima” que se espera de qualquer investimento. Ou seja, assim como a Selic, a taxa DI se transformou em uma referência do mercado, servindo de parâmetro, principalmente, para a renda fixa e fundos de investimentos.

Renda Fixa: é a modalidade de investimento mais procurada pelos investidores que procuram rendimentos mais estáveis e segurança. Chama-se renda fixa justamente porque possui uma **rentabilidade previsível**. Ela pode ser fixada em um percentual mensal ou seguir algum índice como a taxa Selic, o CDI, a inflação ou outro. As condições de investimentos dos títulos são estabelecidas no momento da operação, como prazo de vencimento, taxa de juros, forma de pagamento dos juros, entre outras. Como nos investimentos em geral, esta categoria também oferece ativos com perfis de riscos e objetivos variados. A remuneração dos títulos de renda fixa são basicamente de 3 tipos:

- Pré-fixado: o emissor do título define uma taxa pré-fixada e, se o investidor manter o título até o vencimento, receberá a remuneração acordada.
- Pós-fixado: a rentabilidade é baseada em uma taxa de referência. A principal delas é o CDI (certificado de depósito interbancário). O percentual que será pago do CDI não é fixo e pode variar de instituição para instituição, dependendo do valor investido, da negociação efetuada e da saúde financeira do emissor. Por exemplo, rentabilidade de 90% ou 115% do CDI.
- Juros + índice de inflação: A remuneração varia de acordo com um índice de inflação (principalmente o IPCA) e uma taxa de juros pré-fixada. A remuneração pode ser, por exemplo, IPCA + 7% ao ano para comprar e segurar o papel até o vencimento.

Renda Variável: São investimentos cujos rendimentos não são conhecidos, ou não podem ser previamente determinados, pois dependem de eventos futuros. Possibilitam maiores ganhos, porém o risco de eventuais perdas é maior. O exemplo mais comum são as ações, que são valores mobiliários emitidos por empresas, ofertadas a investidores e negociadas em bolsa de valores. Os principais índices de mercado são o Ibovespa, composto pelas ações de maior liquidez da bolsa de valores, e o IBrX, composto pelas 100 empresas com o maior número de operações e volume negociado nos últimos 12 meses. O benchmark da parcela de renda variável dos perfis da Previ Novartis é o IBr-X.

Investimentos Estruturados: É uma das modalidades de investimentos previstas na legislação e pode ser classificada de diversas formas. Confira abaixo os tipos de investimentos estruturados que a Política de Investimentos da Previ Novartis permite aplicações:

- Fundos Multimercados (Hedge Funds): Investem em diversas classes de ativos, renda fixa, ações, câmbio, índices de preço e derivativos. Podem ser alavancados ou não (se utilizar derivativos podem gerar possibilidade de perda superior ao patrimônio do fundo).
- Fundos de Investimento Imobiliário (FIIs): Fundos que se destinam ao desenvolvimento de empreendimentos imobiliários, como construções de imóveis, aquisição de imóveis prontos, ou investimentos em projetos que viabilizem o acesso à habitação para posterior alienação, locação ou arrendamento.
- Fundos de Investimento em Participações (FIPs): Concentra seus investimentos na aquisição de valores mobiliários de empresas com capital aberto ou fechado. Esses investimentos visam atingir participação na definição da estratégia e gestão da companhia investida, por meio da indicação de membros para o Conselho de Administração. Os FIPs apresentam baixa liquidez e horizonte de retorno de longo de prazo.

Benchmark: é um índice utilizado pelo mercado para avaliar a performance de um investimento (é um índice para comparação). O benchmark escolhido para um perfil de investimento deve ter relação com os segmentos de investimentos onde ele aloca.

IMA (Índice de Mercado ANBIMA): é uma família de índices de renda fixa que representam a dívida pública por meio dos preços a mercado de uma carteira de títulos públicos federais. Os subíndices do IMA são determinados pelos indexadores aos quais os títulos são atrelados:

- IRF-M (prefixados)
- IMA-B (indexados pelo IPCA)
- IMA-C (indexados pelo IGP-M)
- IMA-S (pós-fixados pela taxa Selic)
