

1- Macroeconomic Overview

Increase of US interest rates in December is still the Federal Reserve's base scenario. In Brazil, inflation shows no sign of easing.

International

The IMF quarterly report renewed concern about unbalanced growth within the global economy. The world GDP growth was revised from 3.3% to 3.1% in 2015 and from 3.8% to 3.6% in 2016. According to the IMF, advanced economies are expected to grow 2.0%, a 0.2p.p increase from last year, while emerging economies should slow from 4.6% to 4.0% in 2015. This will be the fifth consecutive year of deceleration for this group of countries. The adverse scenario for commodities, pressure on currencies and volatility in the markets, contribute to increase risks to the global economy, especially for emerging countries.

GDP growth (%)			
Countries	2014	2015 (f)	2016 (f)
World	3,4	3,1	3,6

Brazil

- The government announced new fiscal-restraint measures. However, most of them depend on approval by Congress. There are no signs of recovery in economic activity, and weaker exchange rate is already putting pressure on inflation expectations.
- Markets registered strong volatility in September. BRL depreciated 8.9%, closing at 3.97 reais per dollar (with a peak of 4.25 during the month). The country risk – measured by the 5-year CDS – increased by 126 bps and ended the month at 476. The Ibovespa dropped 3.4% in BRL and 11.3% in USD.
- Central Bank maintained the Selic rate unchanged at 14.25%, signaling its intention to keep it stable for an extended period. However, there is risk of new interest rate hikes if the exchange rate depreciation significantly affects inflation expectations.
- Consumer price index IPCA rose 0.54% in September, decelerating to 9.49% year-over-year (from 9.53% in August). Market-set prices increased 7.5% in the last 12 months, while regulated prices advanced 16.3%.
- Business confidence in the industry dropped 2.9% in September, according to the FGV Business Survey. The consumer confidence indicator also receded by 5.3%, reaching a record low.

The 2016 budget deficit submitted to Congress at the end of August, resulted in the loss of investment grade by Standard & Poor's and contributed to a new movement of BRL depreciation and rising sovereign risk. During the month, the government sought to remedy this situation by proposing adjustment measures which would generate a primary surplus of 0.7% of GDP in 2016. However, the difficulty of approving such measures should no obtain a positive result. The worsening in the economic environment also affected inflation expectations at long term. . Within this context, Previ Novartis' most conservative fund continue to present the best performance.

* IMA-Composed (20% IMA-S + 14,4% IRF-M1 + 25,6% IRF-M1+ + 30% IMA-B5 + 10% IMA-B5+) since January 2015. Previous benchmark was IMA-G ex-C

Nominal Interest – September was sharply impacted by the downgrade of the Brazilian sovereign debt rating to a level below investment grade, after submitting the budget 2016 with a primary deficit. In addition, the president's political weakening has contributed to the strong BRL depreciation and the significant widening of yields by 30 bps on the front end and 140 bps on the belly and back end, going beyond 17%.

Real Interest - The widening of the yield curve's long part was not as strong as the nominal interest rate. The long end increased around 30 bps while the short end fell 65 bps. This behavior can be explained by the expectation that inflation will be higher in the coming years given the looser fiscal policy and the BRL depreciation.

Previ Novartis' fixed income funds had in September a very similar behavior to August. Due to the movement of interest rates described above, funds that follow the IMA-S benchmark (floating-rate linked to Selic) got the best performance in September, along with *long & short funds* and *hedge funds*. On the other hand, funds with IMA-composite benchmark presented another negative month, due to the significant increase of interest rates.

September was another month of intense volatility in the stock market. The IBrX index fell 3.1%, accumulating a loss of 8.7% in 2015 and 15.2% in the last 12 months. Foreign investors reduced by BRL 418 million their participation in the BOVESPA, but still maintain a positive balance of BRL 17.2 billion in 2015.

In September, again, positive performance of sectors benefited by the BRL devaluation, as the pulp & paper (Suzano +9.7%) and food (JBS +18%). Petrobras is one of the companies which most concern the investors, due to its high degree of financial leverage in USD. The drop in the month was 22% and it was not higher due to the fuel price increase.

Previ Novartis' equity funds had a negative performance in September, although above their respective benchmarks (including the accumulated performance in the last 12 months). The positive highlight is the offshore fund managed by Itaú: +5.88% in September and +14.51% in the last 6 months, when the investments began.

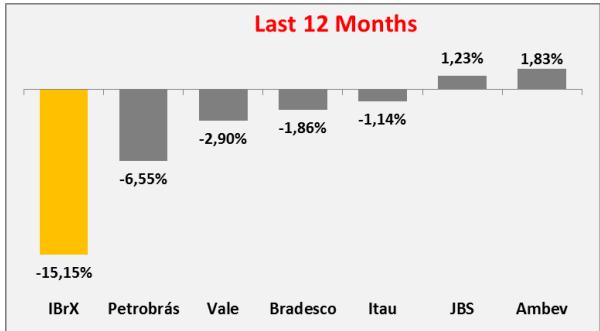

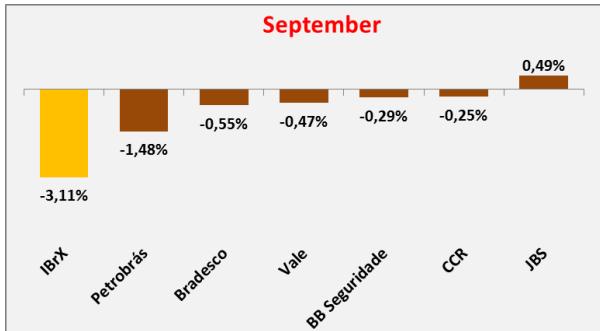

Stock Exchanges in the world (performance in USD)

Due to the BRL devaluation, the Brazilian stock market continued leading the losses in September and the last 12 months

Main contributions to the IBrX index

Petrobrás continues to lead the losses in the stock market
